has been providing solutions
for patients with missing teeth.

**Enjoy smiling, eating,
laughing and speaking
with the confidence
of natural teeth!**

What is a Dental Implant?

An implant is a permanent, medical-grade titanium replacement for your natural, individual tooth root.

A tooth colored crown, which looks and functions precisely like your own natural dentition, is attached on top of the implant.

Due to the strength and design of dental implants and their biocompatibility, which allows them to become integrated with your natural bone, several implants can be used to support a full arch denture.

Dental implant technologies have been in use for more than 50 years, successfully allowing patients to smile, speak and eat as they did before the loss of their natural teeth.

Are Dental Implants Right for Me?

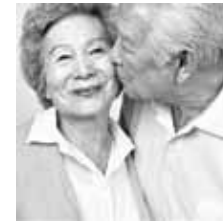

Most patients can replace missing teeth with dental implants, but only your dentist can say for sure.

Your dentist will want to evaluate you carefully with a diagnostic examination and will make specific recommendations to you about the best treatment option to replace your missing teeth in a way that is comfortable for you and comfortable for your budget.

Ask your dentist today for more information on how you might benefit from dental implants.

Why Dental Implant Therapy?

Implants Can Improve Your Quality of Life

- No need for messy adhesives
- They eliminate the need for uncomfortable, removable partial or full dentures
- Cared for with brushing and flossing, just like your natural teeth

Implants Can Help Preserve Natural Facial Contours

- They help prevent oral bone loss to support and preserve natural facial contours

Implants Are Designed to Offer Better Health

- They improve the ability to chew
- Restore the ability to enjoy the foods you love and improve your nutrition

Implants May Give You Greater Self-Confidence

- They look and feel like your natural teeth
- They provide a lasting, durable solution that stays in place
- They can help restore self-esteem and confidence to speak, laugh and smile

Customized Solutions for Every Need!

BTK offers solutions for every oral rehabilitation need.

Whether you have one or more missing teeth, an ill-fitting or uncomfortable denture or a bridge in need of replacement, BTK implant solutions fill the need with no disruption to your remaining healthy dentition.

A **SINGLE IMPLANT WITH CROWN** may be used to replace a missing tooth anywhere in the mouth.

An **IMPLANT SUPPORTED MULTIPLE UNIT BRIDGE** may be used to replace multiple teeth with two implants and without the need to damage healthy adjacent teeth.

IMPLANT RETAINED DENTURES may be used to secure loose fitting dentures by attaching the denture to two or more dental implants, eliminating a need for denture adhesives.

IMPLANT SUPPORTED DENTURES OR FULL BRIDGES may be used to replace all the teeth on the top or bottom jaw by attaching the appropriate prosthesis to several implants.

Many treatment options offer you the possibility to walk out of your dentist's office with a temporary, non-removable tooth replacement on the same day as the implant is placed.

Consult with your dentist about the treatment options that are best for you.
